

Intelligent Video Motion & Tracking Sensor

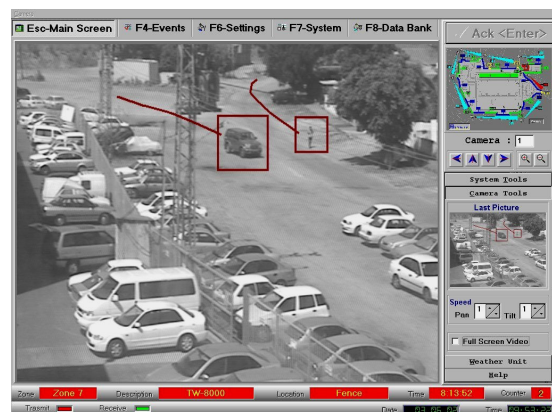

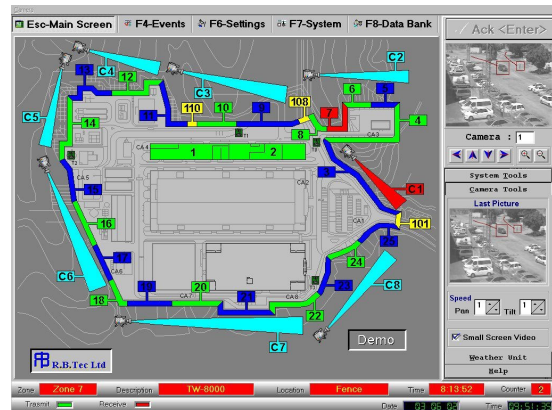

- **Automatic adaptation to surrounding**
- **Motion analysis**
- **Pre-alarm/alarm display capabilities**

IVMD - 909

SENSOR

The IVMD-909 employs algorithms of multi-video motion cells in the video frame, which allows high detection capability even for slow moving objects with extremely low rate of false alarms. The system is composed of basic video processing for 4 video channels with option to expand up to 340 video channels. The IVMD 909 is an integrated part of the VIDALERT 6000 SW but can also function as part of a stand alone CCTV system. In case of intruder entering to the detected field, viewed by the system it will be detected immediately by the sensor and it's movement will be tacked automatically. This process will assist in value the personal operation.
